**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9 and 11, drawn to a method for producing a vaccine containing an immunogenic determinant and the vaccine produced by said method.

Group II, claim(s) 10-14, drawn to a vaccine comprising an immunogenic determinant wherein the immunogenic determinant comprises one or more complexes between a heat shock protein and an antigenic peptide fragment derived from the heat treatment of an extracellular pathogen.

Group III, claim(s) 15, drawn to a method of eliciting an immune response from an animal infection by an intra-cellular pathogen by administering a vaccine containing a stress protein/antigenic peptide fragment complex produced in situ from the intra-cellular pathogen, the synthesis of the complex being induced by external stress stimuli or by genetic modification of the pathogen so as to render its synthesis constitutive.

Art Unit: 1645

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

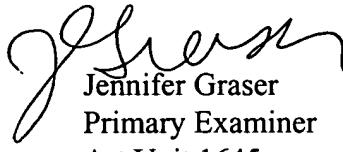

The special technical feature of Group I is the particular set of method steps used to prepare the vaccine composition of claim 11. The steps are not required for the vaccine of claims 10-14. The vaccine of claim 10 is unique from the vaccine of claim 11 and requires specific complexes. The special technical feature of Group III is method for eliciting an immune response from an animal infection by an intra-cellular pathogen by administering a vaccine containing a stress protein/antigenic peptide fragment complex produced in situ from the intra-cellular pathogen, the synthesis of the complex being induced by external stress stimuli or by genetic modification of the pathogen so as to render its synthesis constitutive. The other groups do not use genetic modification to render constitutive synthesis of the complex. Groups I-III do not relate to a single general concept and are unrelated as they contain different method steps, different modes of operation, and comprise different products .

3. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15,1989). The Group 1645 Fax number is (703) 308-4242 which is able to receive transmissions 24 hours/day, 7 days/week.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer E. Graser whose telephone number is (703) 308-1742. The examiner can normally be reached on Monday-Friday from 7:00 AM-4:30 PM.

Art Unit: 1645

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynette Smith, can be reached on (703) 308-3909.
